Research interests

Machine Learning and Deep Learning

My main research focus is to design and execute rigorous experiments to understand the solutions found by deep neural networks and most critically, their bottlenecks, so that we can intelligently design machine learning systems. I am also interested in developing methods to measure and induce abstract representations in neural networks.

Education

Harvard University

PH.D. IN NEUROBIOLOGY

Cambridge, Massachusetts, USA

Jul. 2011 - April 2016

- Advisor: Christopher Harvey.
- Thesis: Population dynamics in parietal cortex during evidence accumulation for decision-making.

University of California, San Diego

B.S. IN PHYSIOLOGY AND NEUROSCIENCE

La Jolla, California, USA

Sept. 2008 - March 2011

Work and Research Experience

DeepMind

RESEARCH SCIENTIST

London, UK

Sep. 2016 - PRESENT

- Using neuroscience-inspired techniques to understand and improve deep neural networks.
- Investigated properties of learned network solutions which are predictive of generalization ability, both in individual networks and across groups of networks.
- Developed new behavioral and introspective methods to measure, understand, and improve abstraction abilities in deep neural networks.

Harvard University

GRADUATE RESEARCH WITH CHRISTOPHER HARVEY

Cambridge, Massachusetts, USA

Jul. 2011 - April 2016

- Developed an evidence accumulation task for head-restrained mice in virtual reality and used calcium imaging of activity in large neuronal populations along with novel computational analyses to study the neuronal population activity dynamics underlying decision-making.
- Using machine learning approaches that had not been applied to neuroscience data sets previously, we identified multiple major features of the population activity, including a distributed code among heterogeneous individual neurons, history signals for past events lasting seconds, and structured trial-trial variability that was predictive of past and future activity patterns.
- Together our results provide data that contradict the long-standing models of evidence accumulation and that propose a novel model of computation based on large-scale neuronal population dynamics.

Salk Institute for Biological Studies

UNDERGRADUATE RESEARCH WITH FRED H. GAGE

La Jolla, California, USA

Jan. 2009 - Dec. 2010

- Investigated the role of REST in adult neurogenesis.

Awards, Honors, & Fellowships

2013-2016	Stuart and Victoria Quan Pre-Doctoral Fellowship Harvard Medical School
2013	Honorable Mention NSF Graduate Research Fellowship
2009-2010	Research Scholar Amylin Pharmaceuticals
2009	Summer Research Fellow Howard Hughes Medical Institute
2009	Scholar Alliance for Affordable Services

Teaching Experience

2012	Teaching assistant, MATLAB/Quantitative Methods Bootcamp Harvard Medical School
